

ABSTRACT OF THE DISCLOSURE

The present invention is a software program for capturing HTTP commands between a client and a remote server application for the purpose of creating an executable recording of HTTP commands as an automated login to the aforementioned remote server application.

The HTTP-API (hypertext transfer protocol application program interface) provides client side users with the ability to use the computer resources of a remote server computer to effect transaction processing and/or the transfer of information from one computer to another without having the absolute need for a web browser, plugins or software languages contained within the server system.
